Oracle BIP Bursting Lab: Steps

Day 31: Oracle BI Publisher Reports in Oracle Fusion
Kawther Ali Almandhari, 19 Oct 2026

Goal

Create one report with 3 suppliers, then use Bursting to split it into one PDF per supplier and send each PDF to that supplier's email.

Data

- 1001: Gulf Star LLC, invoice 1250, supplier1@example.com
- 1002: Muscat Office Supplies, invoice 2400, supplier2@example.com
- 1003: Oman Tech Services, invoice 3600, supplier3@example.com

Names Used

- Folder: /My Folders/KA
- Data Set: DM_SUPPLIER_BURSTING
- Data Model: DM_SUPPLIERS_BURSTING
- Report: Report_Suppliers_Bursting
- Layout (template): Supplier_Burst_Template
- Bursting Definition: Bursting_Supplier
- Job: Burst_Test_1

Step 1: Open the Catalog and create a folder

1. Log in to Oracle Fusion.
2. Click Navigator → Tools → Reports and Analytics → Browse Catalog.
3. Click My Folders on the left.
4. Click the New Folder icon in the toolbar, type: KA → OK.
5. Open the folder. Location shows /My Folders/KA.

Step 2: Create the Data Model

1. Click Create (top bar) → Data Model.
2. In the Diagram tab click + → SQL Query.
3. Name: DM_SUPPLIER_BURSTING
4. Data Source: jdbcAuditViewDataSource
5. Type of SQL: Standard SQL
6. Paste this query and click OK:

```
SELECT 1001 AS supplier_id, 'Gulf Star LLC' AS supplier_name, 1250 AS invoice_amount FROM dual
UNION ALL
SELECT 1002, 'Muscat Office Supplies', 2400 FROM dual
UNION ALL
SELECT 1003, 'Oman Tech Services', 3600 FROM dual
ORDER BY 1
```

Result: group G_1 appears with SUPPLIER_ID, SUPPLIER_NAME, INVOICE_AMOUNT.

Step 3: Save the Data Model and Sample Data

1. Click Save → choose folder KA → Name: DM_SUPPLIERS_BURSTING → OK.
2. Open the Data tab → click View (the 3 suppliers appear).
3. Click Save As Sample Data → OK.
4. Click Save.

Step 4: Create the Report

1. Click Create Report (top of the Data Model page).
2. Select Use Data Model (DM already selected) → Guide Me → Next.
3. Select Layout: Portrait and Table → Next.
4. Create Table: drag SUPPLIER_ID, SUPPLIER_NAME, INVOICE_AMOUNT into the table → Next.
5. Select View Report → Finish.
6. Save in folder KA, Name: Report_Suppliers_Bursting → OK.
7. The report opens showing all 3 suppliers (normal view, no bursting yet).

Step 5: Add the RTF Template (Layout)

1. Catalog → folder KA → under the report click Edit.
2. Click Add New Layout → Generate.
3. Template Name: Supplier_Burst_Template → Generate.
4. Click Save.
5. The new layout Supplier_Burst_Template appears next to the default one.

Note: Do not upload the RTF downloaded from View Report. It has fixed values for all 3 suppliers. The generated RTF uses XML tags, so each PDF shows only its own supplier.

Step 6: Create the Bursting Definition

1. In the report editor click the link DM_SUPPLIERS_BURSTING to open the Data Model.
2. On the left menu click Bursting → +.
3. Name: Bursting_Supplier
4. Type: SQL Query
5. Data Source: jdbcAuditViewDataSource
6. Split By: /DATA_DS/G_1/SUPPLIER_ID
7. Deliver By: /DATA_DS/G_1/SUPPLIER_ID
8. Enable Consolidated Output: unchecked (to get separate files)
9. Paste this delivery query in SQL Query:

```
SELECT '1001' KEY, 'Supplier_Burst_Template' TEMPLATE, 'RTF' TEMPLATE_FORMAT,
       'en-US' LOCALE, 'PDF' OUTPUT_FORMAT, 'EMAIL' DEL_CHANNEL,
       'supplier1@example.com' PARAMETER1, NULL PARAMETER2,
       'noreply@example.com' PARAMETER3,
       'Supplier Payment Advice - Gulf Star LLC' PARAMETER4,
       'Please find your payment advice attached.' PARAMETER5,
       'true' PARAMETER6, NULL PARAMETER7
FROM dual
UNION ALL
SELECT '1002','Supplier_Burst_Template','RTF','en-US','PDF','EMAIL',
       'supplier2@example.com', NULL, 'noreply@example.com',
       'Supplier Payment Advice - Muscat Office Supplies',
       'Please find your payment advice attached.','true', NULL
FROM dual
UNION ALL
SELECT '1003','Supplier_Burst_Template','RTF','en-US','PDF','EMAIL',
       'supplier3@example.com', NULL, 'noreply@example.com',
       'Supplier Payment Advice - Oman Tech Services',
       'Please find your payment advice attached.','true', NULL
FROM dual
```

10. Click Save.
11. Click Data Sets on the left → Data tab → View → Save As Sample Data → OK → Save.

Meaning of the delivery query columns:

- KEY: must match the Split By value (SUPPLIER_ID)
- TEMPLATE: the layout name in the report (Supplier_Burst_Template)
- OUTPUT_FORMAT: PDF
- DEL_CHANNEL: EMAIL
- PARAMETER1: To
- PARAMETER2: Cc
- PARAMETER3: From
- PARAMETER4: Subject
- PARAMETER5: Message body
- PARAMETER6: Attach output (true)
- PARAMETER7: Reply-To

Step 7: Enable Bursting in the Report

1. Click Return to go back to the report.
2. Click the top Properties button (not the one under the layout).
3. In the General tab check Enable Bursting and select Bursting_Supplier.
4. Click OK → Save.

Step 8: Schedule the Report

1. Catalog → folder KA → under the report click More → Schedule.
2. Overview shows: Outputs: View bursting definition.
3. Open the Output tab and confirm Use Bursting Definition to Determine Output & Delivery Destination is checked.
4. Click Submit → Report Job Name: Burst_Test_1 → OK.

5. Message: Job "Burst_Test_1" successfully submitted → OK.

Step 9: Check the Result

1. Catalog → folder KA → under the report click More → Job History.
2. Click Burst_Test_1.
3. Under Output & Delivery there are 3 separate PDF outputs using Supplier_Burst_Template.
4. Expand each output to see Split by Value: 1001, 1002, 1003, each with its own To and Subject.

Result

- The report was split by SUPPLIER_ID into 3 separate PDFs (1001, 1002, 1003).
- Each output is linked to the correct supplier email and subject.
- Bursting works correctly.
- Job status is "Problem" only because the email delivery failed: the addresses are fake (example.com) and the demo environment has no email server set up. As the lab notes say, delivery must be supported/configured by the organization.

Common Mistakes

- Uploading the RTF downloaded from View Report: it has fixed data. Use Generate instead.
- Adding the bursting under Parameters by mistake: delete it and use the Bursting menu item.
- Enable Consolidated Output checked: uncheck it to get separate files.
- TEMPLATE name not matching the layout name: it must be exactly Supplier_Burst_Template.
- Expecting bursting from View Report: View shows all rows. Bursting runs only with Schedule.
- Job not found under Jobs: jobs that run immediately appear under Job History.
