

Restrict Personalization Access (Site Level)

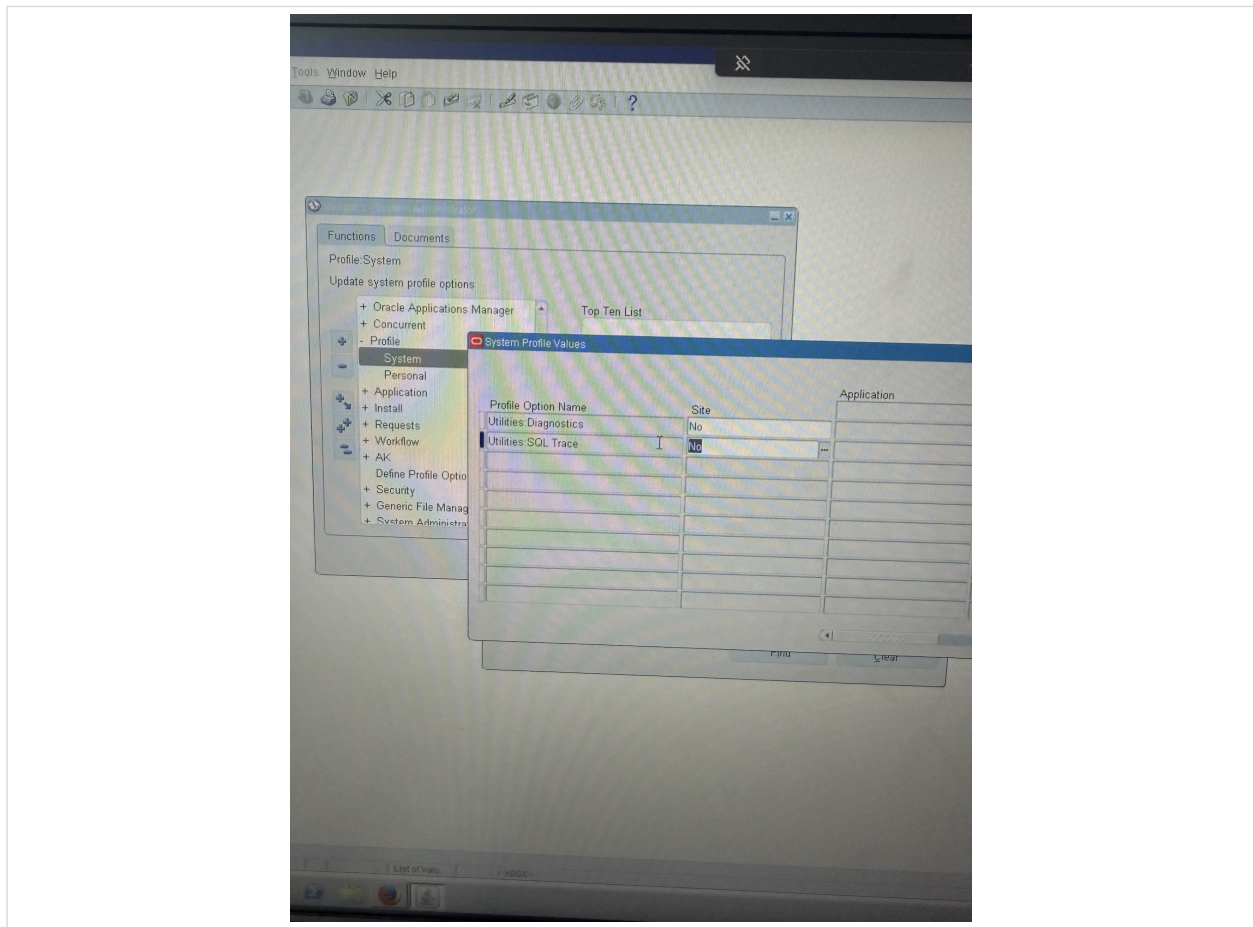

1. Go to System Administrator → Profile → System.

2. In the Find window, type UTIL% in the Profile field and click Find.

3. Set the Site level for Utilities: Diagnostics to No, and SQL Trace to No as well, then save.

4. Now open Human Resources and try Help → Diagnostics → Custom Code → Personalize again. You won't be able to open the Personalization form anymore.
